

OEM-Quality Euro & Asian Metal Base Signal Bulbs

Finest German & Japanese Quality • (E1) Approved
Non-corroding Nickel Plated Bases

European and Japanese vehicles use bulbs that can be tough to find in North America. Similar American-type bulbs may seem to fit and work, but the wrong bulbs can cause socket corrosion and serious problems with the vehicle's electrical system. Many vehicles have bulb outage warning systems that require bulbs of precisely the correct wattage. The trouble caused by incorrect bulbs can seem completely unrelated. For example, if American-type brake light bulbs are installed in certain German cars, the cruise control stops working. To assure customer satisfaction and prevent wasted diagnostic time, specify signal bulbs from Candlepower. They're precision-engineered and built in Germany and Japan to rigid OEM quality standards with top grade materials, and carry the (E1) Type Approval mark, where applicable—the toughest approval mark to get, and your assurance that these bulbs don't just fit, they match!
