

OEM Quality Euro & Asian Wedge Base Signal Bulbs

Finest German & Japanese Quality • (E1) Approved
High Precision Bases

European and Japanese vehicles use many wedge base bulbs that can be hard to find in North America. Similar American-type bulbs may seem to fit and work, but the wrong bulbs can cause socket corrosion and serious problems with the vehicle's electrical system. Many vehicles have bulb failure warning systems that require bulbs of precisely the correct wattage. The trouble caused by incorrect bulbs can seem completely unrelated. For example, if American-type brake light bulbs are installed in certain German cars, the cruise control stops working. To assure customer satisfaction and prevent wasted diagnostic time, specify signal bulbs from Candlepower. They're precision engineered and built in Germany and Japan to rigid OEM quality standards with top grade materials, and carry the (E1) Type Approval mark, where applicable—the toughest approval mark to get, and your assurance that these bulbs don't just fit, they match!

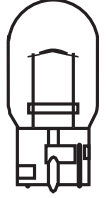

bulb type	order number	power (Volts)	power (Watts)	base (ECE)	base (USA)	base material
P27/7W	17945	12	27/7	W2.5×16d	plastic wedge	plastic
